Congratulations to the entire group -- your dedication to the collaborative process looks to be bearing very nice fruit! I am sure that we all will be able to look back five years from now at what we will have accomplished together and know that we have done amazing things to help improve health for the world. First step accomplished & I couldn't be prouder to be on your team,
Jonna

Hello OHW-NG consortium,

I'm thrilled to report that today we received the attached letter from USAID saying that we are the apparently successful candidate for the OHW-NG award! There are quite a few technical application and cost application questions that have to be answered and submitted by COB this Tuesday, August 20, and I'll reach out to some of you tomorrow (Friday) with specific requests for information in coordination with my team at UCD.

For now please read over the USAID letter, and for questions where you see your organization called out for clarification or revision, please get started organizing your ideas and responses. Everything they have asked and requested is feasible, and the nature of a cooperative agreement means that these sort of iterative planning steps will be needed now and then. I've also attached the proposal that was submitted so you have it for easy reference.

Congratulations to everyone on a job well done with the proposal thus far. Of course given the various government dynamics, it is always possible that we will face delays and changes that are beyond our control, but for now we can focus on getting responses back to USAID by Tuesday. One step at a time but we have jumped through a big hoop!

Very best wishes from [REDACTED] Woutrina

Hi OHW-NG consortium,

We've just submitted our One Health Workforce - Next Generation application and have received email confirmation from USAID! Thanks to everyone for contributing your ideas, energy, enthusiasm, and time to this effort. Attached are the final technical narrative and the associated annexes, as two separate files, including 36 letters of commitment and support that speak to the impressive breadth of our teams and networks. We will certainly be in touch as we have updates and look forward to finding more ways to collaborate in the future.

Very best wishes, Woutrina
